

Soapstone Enhancer

Finally! We have found the answer to countless applications of mineral oil. Working with a very respectable natural products developer we are now able to offer this long awaited for Soapstone Enhancer.

With two applications to freshly installed soapstone no further applications will be needed for months, if not years. You may do some touch ups for scratches, but even that is unlikely.

Soapstone Enhancer will provide a low luster finish on soapstone without the continuous reapplication that is required with mineral oil. At the same time not losing the soft, velvet feel of the soapstone we all love to touch and work on.

What it is

Soapstone Enhancer is made from food grade Walnut Oil and T 1 Carnauba Wax Flakes. There are no solvents added which means no VOC's (volatile organic chemical) or added fragrances.

Soapstone Enhancer is made with food contact safe material. This means it is safe for food to touch or lay on the surface without fear of contamination. Walnut oil is a drying oil. As the walnut oil takes in oxygen it will polymerize or cure. This is why walnut oil does not go rancid. It will cure before it can spoil.

Soapstone Enhancer is made from all natural products and is not a petroleum product.

The coats will last for years as long as they are not rubbed or abraded off or some harsh chemical is used to remove it . Coverage for the 8 oz. is 65 to 75 sq feet and 120 to 150 for the 16 oz.

Available in 8 and 16 oz. sizes.

Directions:

Soapstone Enhancer is a pale white soft paste in the jar. When applied in a thin layer it will be transparent. Because it contains walnut oil, each jar will develop a thin self sealing skin on top of the wax. Simply peel this away and dispose of it.

Rub Enhancer into the surface with a soft cloth. Allow to set for 15 to 30 minutes, then buff off. Multiple layers may be applied a day apart from each other. In sinks made of soapstone please allow wax to dry over night before filling with water.

Wooden ware, cutting boards, bowls and the like will also benefit from Soapstone Enhancer. It also can be used on Honed Granite but would not work well on high polished stone or stone with a high polish sealer.

Soapstone Enhancer can be affected or removed with strong chemical such as vinegar and ammonia.

The Enhancer is a soft paste that goes on easy.

CONTAINS WALNUT OIL call your physician if allergic reaction occurs
